

## **Coastal Dependent Uses and Community Development**

### **PERFORMANCE MEASURES**

#### **CD1. Number of dollars spent on coastal community planning and development activities**

The purpose of this measure is to quantify the financial contribution of the CZM program in improving coastal community planning and development in the coastal zone. Eligible activities include planning, regulatory programs, education and outreach, technical assistance, and on the ground projects. Matching dollars reported should be limited to the amount included in your CZMA award application. Additional matching dollars should be reported as leveraged dollars in measure CD2. Report the following:

- 1) The number of CZMA federal and matching dollars spent during the reporting period on activities related to:
  - a) managing coastal dependent uses; and
  - b) community planning and development
- 2) The number of state, non-CZMA dollars spent by the CZM program during the reporting period on activities related to:
  - a) managing coastal dependent uses; and
  - b) community planning and development.

#### **CD2. Number of dollars leveraged by CZMA funds for coastal community planning and development activities**

The purpose of this measure is to quantify the additional or leveraged dollars that CZM activities generate to balance competing demands and improve coastal community planning and development. Sources of leveraged dollars can be federal, state, or local government agencies or other organizations such as nonprofits, for-profits or foundations. Report the following:

- The number of dollars leveraged during the reporting period that are directly related to activities funded with CZMA federal or matching funds to manage coastal dependent uses, community planning, and development.

#### **CD3. Number of CZM programs that assist coastal communities to promote growth management**

The purpose of this measure is to describe the role of CZM programs in working with coastal communities to balance the need for economic development with resource management. Activities can include planning, technical assistance, education and outreach, and on the ground projects such as demonstration sites for best management practices. Assistance can also include non-financial assistance such as technical assistance. More information on growth management principles can be found at: <http://www.epa.gov/livability/index.htm>. This measure requires a response of “YES” or “NO” to the following questions:

- 1) Were CZMA federal or matching funds used to assist coastal communities with growth management during your reporting period?

- 2) Did the CZM program use non-CZMA funds to assist coastal communities with growth management during your reporting period?

**CD4. Percent of coastal communities that are supported by CZM programs in developing and implementing local plans that incorporate growth management principles**

The purpose of this measure is to describe the role of CZM programs in working with communities in the coastal zone to manage development. It focuses on activities to support coastal communities in developing or implementing local plans that incorporate growth management principles. Some examples of growth management principles include: mixed land uses; compact building design; walkable neighborhoods; preservation of open space, farmland, natural beauty, and critical environmental areas; strengthening and directing development towards existing communities; and collaboration in development decisions by the community and stakeholders. More information on growth management principles can be found at: <http://www.epa.gov/livability/index.htm>. Programs should establish criteria to differentiate a “community” based on how the data is available, program needs, and state policies. Eligible support activities include financial assistance, technical assistance, and training for coastal communities. This measure requires reporting the following:

- 1) The total number of coastal communities in the coastal zone; and
- 2) The number of coastal communities supported by CZMA federal or matching funds to develop or implement local plans that incorporate growth management principles.

**CD5. Number of coastal communities that have been recognized for growth management efforts through national or state award programs**

The purpose of this measure is to describe the level of success and recognition of coastal communities in implementing effective growth management efforts in the coastal zone. Recognition programs can include state or national awards such as the Sustainable Community Certification Program, Smart Growth Achievement Award, and All-America City Program. Report the following:

- The number of coastal communities that have been recognized for growth management efforts.

**CD6. Number of CZM programs with enforceable policies that place priority on coastal dependent uses in their permitting and planning programs**

The purpose of this measure is to describe the role of CZM programs in developing enforceable policies to place a priority on coastal dependent uses in the coastal zone. To be considered, enforceable policies must have been approved by OCRM as part of the approved CZM program. This measure requires a response of “YES” or “NO” to the following question:

- Does your CZM program have enforceable policies that place priority on coastal dependent uses in permitting and planning programs?

### **CD7. Number of CZM programs that provide financial and/or technical assistance to coastal communities for port and waterfront redevelopment**

The purpose of this measure is to describe the role of CZM programs in assisting coastal communities in redeveloping underutilized urban ports and waterfronts. Programs should use the criteria established in CD4 to differentiate a “community”. This measure requires a response of “YES” or “NO” to the following questions:

- 1) Were CZMA federal or matching funds used during the reporting period to provide financial or technical assistance to coastal communities for port or waterfront redevelopment?
- 2) Did the CZM program use non-CZMA funds to provide financial or technical assistance to coastal communities for port or waterfront redevelopment?

### **CD8. Percent of coastal communities with waterfront areas supported by CZM programs in port or waterfront redevelopment projects**

The purpose of this measure is to describe the role of CZM programs in redeveloping underutilized or deteriorating urban waterfront areas and ports. Port or waterfront redevelopment activities can include planning, technical assistance, public outreach, and on the ground projects. Eligible on the ground projects can include land acquisition; rehabilitation or acquisition of piers for public use; rehabilitation of bulkheads for improved public safety or access; and removal or replacement of pilings to provide increased recreational use. Programs should use the criteria established in CD4 to differentiate a “community”. Report the following:

- The number of coastal communities that conducted port or waterfront redevelopment activities using CZMA federal or matching funds.

## **CONTEXTUAL MEASURES**

### **CD9. Percent of coastal communities with waterfronts that has identified priority port and/or waterfront areas in need of redevelopment**

The purpose of this measure is to describe the role of CZM programs in assisting coastal communities in planning for port and waterfront needs. There is no time limit included for this measure; therefore your program may want to establish a time limit for when efforts that identified priority areas will be considered. At a minimum, programs should only include a plan or other identification effort that has been completed or substantially updated within the last 5 years. Programs should use the criteria established in CD4 to differentiate a “community”. Report the following:

- The number of coastal communities that have identified priority port or urban waterfront areas in need of redevelopment.
